

## Program Vision

The acquisition of a HitTrax® Simulator will provide the Frostburg State University Department of Athletics with a competitive and engaging edge for Bobcat Baseball players by delivering millisecond response time, proven accurate metrics and high-end graphics in a ground-breaking program. A HitTrax® Simulator is a system that offers unmatched performance and value, as FSU coaches strive to provide the key metrics that motivate players and bring that powerful “wow factor” and realism to the team’s indoor and outdoor trainings. The FSU Department of Athletics believes the purchase of a HitTrax® Simulator will give its players and the department an advantage on recruitment, player development and overall competitiveness.

A HitTrax® Simulator will redefine training by providing key metrics for hitters and pitchers to measure performance and automated reports to chart progress. The catching module offers an innovative approach to training by measuring pop-time, exchange/transition time, arm strength and accuracy. It also simulates “throw-to-second” and calculates the likely result. An integrated video feature can be added to all of the modules for a higher level of analysis and visual feedback providing quantitative results.

## Funding Needs

The cost of a HitTrax® Simulator is \$20,000.

Your gift toward the purchase of a HitTrax® Simulator will be counted toward FSU’s Forging Futures campaign.
